Summary

Backend engineer with **2+ years** building secure, high-volume **Node.js** services for mission-critical **BFSI/FinTech** platforms at SBI, ICICI, Yes Bank and Thomas Cook (TCIL), including **SWIFT / ISO 20022** payment messaging. Owned features end to end from design through **REST API** and **microservice** implementation, deployment and production support, with hands-on **event-driven** work over **RabbitMQ** and **Oracle/MongoDB** optimization. Strong production debugging and **RCA** record; comfortable across **Docker**, **NGINX**, **AWS** and **CI/CD**.

Technical Skills

Backend: Node.js, TypeScript, JavaScript, Express.js, REST APIs, Microservices, Event-Driven Architecture, RabbitMQ / AMQP, Async Processing, RPC, Java, Python
Data: Oracle, PL/SQL, MongoDB, MySQL, Redis, Query Optimization, Indexing
Cloud & DevOps: AWS, Docker, NGINX, Git, GitLab CI/CD, Linux
Practices & Domain: DSA, System Design (HLD/LLD), Application Security (AES/RSA, XSS), SWIFT MT / ISO 20022, Forex & Treasury, Payments, KYC/Regulatory Compliance
AI Engineering: MCP server development, Claude Code (skills, plugins, hooks, subagents), OpenAI / Gemini APIs
Familiar with: Kafka, NestJS, Kubernetes, PostgreSQL

Work Experience

•Software Development Engineer *June 2024 – Present*
Credence Analytics – BFSI Treasury & Capital Markets Products Mumbai, India

- **Event-Driven Sync (SBI Decoupling)**: Architected fault-tolerant, queue-backed synchronization schedulers for the SBI decoupling initiative, replacing tightly coupled synchronous calls with asynchronous inter-service messaging across **6 services** – 2 legacy monolithic applications and 4 modern Node.js applications – sustaining ~10K transactions/day with no data loss.
- **Enterprise Integrations**: Delivered 7+ third-party integrations across 4 BFSI clients (SBI, ICICI, Yes Bank, TCIL) – Video KYC (6 RPC endpoints), APIGEE gateway authentication for OTP/SMS, CRM interface RPCs, GST E-Invoice (IRN) and Razorpay cancel/refund payment APIs.
- **Legacy Modernization (Thomas Cook / TCIL Mudra 2)**: Migrated legacy Mercury and Mudra1 modules into Node.js REST APIs and RPCs across **3 production applications** – retail forex, SWIFT credit transfer (MT199, ISO 20022 *pacs.008*, XSD validation) and manual transactions – refactoring 10+ core tables, hardening concurrency with row-level locks and enforcing PAN/Aadhaar/TCS regulatory validations.
- **Production Support & RCA**: Diagnosed and resolved 100+ Redmine-tracked production defects across outages, security and performance – from reflected XSS to currency-pair booking failures – converting recurring incidents into permanent fixes and cutting repeat tickets by **20%**+.
- **Encryption Framework**: Hardened API traffic with an end-to-end encryption layer (AES, RSA, Base64) and built the internal Encryption Watcher framework enforcing payload encryption across **60+ endpoints**, keeping client-facing flows audit-compliant.
- **Oracle Query Tuning**: Optimized high-volume Oracle/PL-SQL dashboard and reporting queries as routine production ownership, cutting response times from ~2s to **under 1s** via predicate rewrites and indexing.
- **Developer Tooling & AI Automation**: Automated internal patch preparation with **CredflowCLI**, a published npm CLI cutting release prep from over an hour to **4–5 minutes**, and authored reusable Claude Code skills and hooks standardizing bug-fix, review and release workflows across production repositories.

•Technical Trainer *January 2023 – May 2024*
TnL India Bangalore, India

- **Technical Instruction & Development**: Delivered computer science and mathematics instruction to approximately 30 students while strengthening expertise in Data Structures and Algorithms, system design, and Node.js development through hands-on projects and software engineering interview preparation.

•Software Development Intern *June 2022 – December 2022*
Edureka Remote

- **Full-Stack E-Commerce**: Built a retail e-commerce application on Node.js, Express.js and MongoDB with a React.js storefront, implementing catalog, cart and order REST APIs.

Projects

- **smart-notify – Event-Driven Notification Microservice**: Designed a multi-channel email/SMS notification service where producers publish to **RabbitMQ** and independent consumers handle delivery with retries and dead-lettering; containerized with **Docker** behind **NGINX**.
- **devflow-mcp – Developer Automation Backend**: Built a TypeScript Model Context Protocol server exposing **50+ tools** over the ERPNext, GitLab, Redmine and Taiga REST APIs, automating timesheets, task logging, merge-request analysis and release creation. GitHub
- **oracle-mcp – Read-Only Oracle Introspection Server**: Built a TypeScript MCP server exposing **24 read-only tools** for schema introspection, dependency tracing and **DBMS_XPLAN execution-plan analysis**, enforcing a SELECT-only guard with bind parameters so production databases cannot be mutated. GitHub

Education

B.Tech, Computer Science and Engineering, Indian Institute of Information Technology, Trichy 2021
Certification: JavaScript Algorithms & Data Structures – freeCodeCamp
